

DR. BARRY FELDNER
DDS MS PC

Patient Information/*Alzheimer's Disease*

- Inflammation is associated with Alzheimer's Disease and periodontal disease is a chronic inflammatory disease.
- Periodontal pathogens (bad bugs) and the "toxins" they produce can be found in the brain.
- Patients with periodontal disease have higher rates of Alzheimer's Disease.
- Patients with dementia or AD have difficulty maintaining proper oral hygiene and are at higher risk of cavities and periodontal disease.
